MERN STACK

DAY – 30

29 July 2026

PROJECT: PARKEASY - PARKING MANAGEMENT SYSTEM

SIGNUP API DEVELOPMENT

• The Signup API is developed to allow new users to register in the ParkEasy parking management system.

• The API is created using Express.js and connected with MongoDB through the User model.

• The Signup API handles user registration requests using the POST method.

API Endpoint:

```
POST /signup
```

• The user registration data is received from the frontend in JSON format.

• Before creating a new account, the system checks whether the email already exists in the database.

The email verification is performed using:

```
User.findOne({email:req.body.email})
```

• If the email already exists, the system returns:

Email already exists

• If the email is not found, a new user object is created using the received data.

• The user information is stored in MongoDB using:

```
user.save()
```

• After successful registration, the server sends a success response:

- Success status

- Account Created Successfully message

• Error handling is implemented using try-catch blocks to manage server errors.

Working

1. The app.post("/signup") route creates the Signup API.
2. User registration details are received through the request body.
3. The system searches the database for an existing email.
4. If the email exists, registration is stopped and an error message is returned.
5. If the email is unique, a new User document is created.
6. The user data is saved into MongoDB.
7. A successful response is sent back to the frontend.
8. If any error occurs, an error response is returned.

```
app.post("/signup",async(req,res)=>{
    try{
        const exist=await User.findOne({email:req.body.email});

        if(exist)
            return res.json({success:false,message:"Email already exists"});

        const user=new User(req.body);
        await user.save();

        res.json({
            success:true,
            message:"Account Created Successfully"
        });

    }catch(err){
        res.json({success:false,message:err.message});
    }
});
```
