CSS Display & Flexbox

CSS Display and Flexbox properties are used to control how elements appear and how they are arranged on a web page.

CSS display Property

The display property specifies how an HTML element is displayed on the webpage.

It can have the following values:

- **inline** – Element appears on the same line and takes only the required width.
- **block** – Element starts on a new line and occupies the full available width.
- **inline-block** – Element stays on the same line while allowing width and height to be set.
- **flex** – Creates a flexible layout container for arranging child elements.

CSS flex-direction

The flex-direction property specifies the direction in which flex items are placed.

It can have the following values:

- **row** – Items are placed from left to right (Default).
- **row-reverse** – Items are placed from right to left.
- **column** – Items are placed from top to bottom.
- **column-reverse** – Items are placed from bottom to top.

CSS flex-wrap

The flex-wrap property controls whether flex items stay on one line or move to the next line. It can have the following values:

- **nowrap** – Items remain on a single line (Default).
- **wrap** – Items move to the next line when required.
- **wrap-reverse** – Items wrap onto new lines in reverse order.

CSS gap

The gap property creates space between flex or grid items without using margins.

Advantages

- Creates equal spacing between items.
- Makes layouts cleaner.
- Reduces the need for margins.

CSS align-self

The align-self property aligns an individual flex item differently from other items in the same flex container. Common values include:

- flex-start
- center
- flex-end
- stretch
- baseline

It overrides the alignment specified by the container's align-items property.

CSS order

The order property changes the visual order of flex items without changing the HTML structure.

Characteristics

- Default value is 0.
- Lower order values appear first.
- Higher order values appear later.

It is useful for rearranging items in responsive layouts.
