MERN STACK

DAY – 38

7 August 2026

PROJECT: PARKEASY - PARKING MANAGEMENT SYSTEM

Vehicle Profile

The Vehicle Profile module allows users to add and update their vehicle details. The saved vehicle number and type are automatically used while booking a parking slot.

APIs Used

1. Get Vehicle Details

GET

```
/user-dashboard/:id
```

Purpose: Retrieves the user's profile and registered vehicle details.

2. Update Vehicle Details

PUT

```
/update-vehicle/:id
```

Request

```
{
  "number": "PB10AB1234",
  "type": "Car"
}
```

Purpose: Updates the user's vehicle information.

Parking Bills

The Parking Bills module displays bills for completed parking bookings. It shows the slot number, date, time, vehicle number, parking duration, and total parking charges.

API Used

GET

```
/my-bills/:userId
```

Purpose: Retrieves all completed parking bills of the logged-in user.

Response

```
{
 "success": true,
 "bills": [
   {
    "bookingId": 1,
    "slot": "A-101",
    "date": "2026-08-04",
    "time": "09:00 - 11:00",
    "vehicle": "PB10AB1234",
    "duration": 2,
    "amount": 100,
    "status": "Paid"
   }
 ]
}
```

Working

- The page fetches completed bills using GET /my-bills/:userId.
- Only bookings with Completed status are shown.
- Parking charges are calculated as Duration × ₹50 per hour.

- Each bill is displayed as a parking receipt with payment status marked as Paid.
