

MERN STACK

DAY – 3

27 June 2026

FORM

A form is used to collect user input and send it to a server for processing.

Common attributes of <form>:

- action → where data is sent
- method → how data is sent (GET or POST)

Common HTML Input Types

Text & Information Inputs

- text: Default single-line text field for names, usernames, or basic text entry.
- password: Masks entered text with dots or asterisks for secure credential entry.
- email: Accepts only validly formatted email addresses and provides native browser validation.

Selection & Choice Elements

- checkbox: Square boxes allowing users to choose zero, one, or multiple options from a set.
- radio: Circular buttons grouped by matching name attributes; allows selecting exactly one option from a set.
- color: Opens a native operating system color picker control to select a hex value.
- file: Launches a system file browser dialog allowing users to upload documents or images

Action Buttons

- submit: Triggers the browser to package form data and transmit it to the form's action URL.
- reset: Reverts all interactive controls inside the form back to their original default values.

-

button: Produces a standard, neutral clickable button meant to be tied to custom JavaScript events.

- image: Employs an image file to double as a clickable form submission button

Numbers & Ranges

- number: Limits input strictly to numeric characters and includes optional min, max, and step attributes.
- range: Displays a slider control interface for selecting an approximate numerical value within bounds.

Date & Time Pickers

- date: Generates a standard calendar selector tool to select day, month, and year.
- time: Displays an hour and minute clock interface.
