

MERN STACK

DAY – 8

3 July 2026

Font Awesome, CDN, Google Fonts, Icons, CSS Transformations & Transitions

Font Awesome

Font Awesome is a popular icon library that provides scalable vector icons that can be easily customized using CSS. These icons are used instead of images because they are lightweight, scalable, and style-friendly.

- Icons are added using class names.
- They can be resized, colored, and animated using CSS.
- Example use: social media icons, buttons, UI elements.

Example:

```
<i class="fa fa-home"></i>
```

Google Fonts

Google Fonts is a free service that provides a wide collection of web fonts.

- Helps improve website typography.
- Easy to integrate using link or CSS import.
- Enhances design and readability.

Example:

```
<link href="https://fonts.googleapis.com/css2?family=Roboto&display=swap" rel="stylesheet">
```

Icons in Web Design

Icons are visual symbols used to represent actions, objects, or ideas.

- Improve user experience (UX).
- Make interface more attractive and intuitive.
- Can be used from libraries like Font Awesome or Material Icons.

CSS Transformations

CSS transform allows modification of an element in 2D or 3D space.

(a) translate(): Moves an element from its original position.

```
transform: translate(50px, 20px);
```

(b) translateY(): Moves element vertically.

```
transform: translateY(30px);
```

(c) scale(): Increases or decreases size of element.

```
transform: scale(1.5);
```

(d) scaleX(): Scales element horizontally.

```
transform: scaleX(2);
```

(e) scaleY(): Scales element vertically.

```
transform: scaleY(0.5);
```

(f) skew(): Tilts element along X and Y axis.

```
transform: skew(20deg, 10deg);
```

(g) skewY(): Skews element only in vertical direction.

```
transform: skewY(15deg);
```

(h) rotate(): Rotates element clockwise or anticlockwise.

```
transform: rotate(45deg);
```

CSS Transitions

CSS transitions are used to create smooth and gradual changes in property values over a specified duration. They enhance user experience by avoiding sudden changes in style.

- **Transition Property** : It defines which CSS property will undergo the transition effect.
- **Transition Duration** : It specifies the time taken for the transition to complete.
- **Transition Delay** : It defines the time delay before the transition starts after it is triggered.
- **Transition Timing Function** : It controls the speed pattern of the transition effect, such as slow start, slow end, or constant speed.

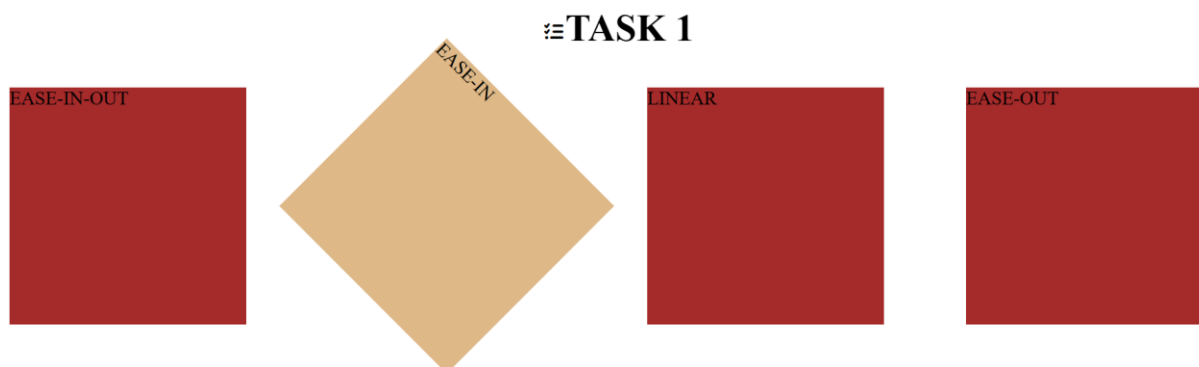

Hover Effect

When a user hovers over an element, CSS transitions can smoothly change its color, size, or position.

Example:

- Button increases size on hover
- Color changes smoothly
- Movement happens gradually instead of instantly

TASK:

```

.a,.b,.c,.d {
  background-color: #brown;
  height: 200px;
  width: 200px;
  transition-property: all;
  transition-duration: 5s;
  transition-delay: 0.2s;
  transition-timing-function: ease-in-out;
}

.a:hover {
  transform: rotate(45deg);
  background-color: #burlywood;
}

.b:hover {
  transform: rotate(45deg);
  background-color: #burlywood;
}

.c:hover {
  transform: rotate(45deg);
  background-color: #burlywood;
}

.d:hover {
  transform: rotate(45deg);
  background-color: #burlywood;
}

.li {
  display: flex;
  justify-content: center;
  padding: 10px;
  width: 100%;
}
</style>
</head>
<body>
  <div class="li">
    <i class="fa-solid fa-list-check" style="margin-top: 35px;"></i>
    <h1>TASK 1</h1>
  </div>
  <div class="main">
    <div class="a">EASE-IN-OUT</div>
    <div class="b">EASE-IN</div>
    <div class="c">LINEAR</div>
    <div class="d">EASE-OUT</div>
  </div>

```
